

TransNet DASHBOARD FACT SHEET

Future I-15 Freeway

Public accountability

A milestone for San Diego's transportation future, the *TransNet* Dashboard gives residents information on how their *TransNet* tax dollars are being spent, and acts as a mechanism for ensuring accountability throughout the process.

SANDAG and Caltrans have launched the innovative, interactive Dashboard — an online reporting tool that will provide the public with up-to-date information on transportation projects underway in the San Diego region that are funded by the *TransNet* half-cent sales tax.

Construction management in the information age

The state-of-the-art Dashboard is a Web-based connection to current schedule, budget, and expenditure information for the *TransNet* Early Action Program (EAP),

which includes highly anticipated projects underway on Interstates 5, 15, 805, and State Routes 52, SR 76, and Mid-Coast corridors.

Users have the flexibility to drill down for more detailed information on various segments of the innovative I-15 Managed Lanes project, analyze the I-15 corridor as a whole, or select a big-picture, regional view when visiting the site.

For the general user, the Web site provides valuable information on major transportation projects underway in the region. The backbone of the Web site is programming that merges construction, finance, and schedule data from SANDAG and Caltrans databases for easy access on the Dashboard.

Welcome

Click here to bookmark this page!

Welcome to your resource for *TransNet* Early Action Projects status and updates. From timelines and funding information to project milestones and public involvement opportunities, the information you're looking for is just a click away.

You can download current project images and maps and find answers to frequently asked questions. You also have the opportunity to provide comments and request email updates on any or all of the projects on this site.

This Web site is your resource for construction updates, project information, public meeting and hearing notices, and provides opportunities to get answers to your questions. The site also includes a new feature called the *TransNet* Dashboard. The *TransNet* Dashboard provides detailed information for tracking project timelines, milestones, budgets, and expenditures. The *TransNet* Dashboard shows how your tax dollars are being put to use in effective ways to keep San Diego moving!

Keep San Diego Moving

The *TransNet* Dashboard, created by SANDAG in collaboration with Caltrans and the engineering firm PBS&J, is a key element of the larger, comprehensive Keep San Diego Moving Web site (KeepSanDiegoMoving.com)—the region’s window to in-depth information on the *TransNet* Early Action Program — including project descriptions, construction schedules, public meeting notices, maps, news releases, and other information.

What is TransNet?

Travel north, south, east, or west, and you’ll see highways being expanded, Trolley lines being extended, bus routes being added, local streets being paved, and bike lanes multiplying. Much of that work was funded by the region’s \$3.3 billion *TransNet* program.

In November 2004, more than 67 percent of voters countywide approved an extension of the *TransNet* program to 2048. This 40-year extension will generate more than \$14 billion for transportation improvements, and includes an innovative \$850 environmental mitigation program.

As the regional forum for decision-making, SANDAG allocates *TransNet* and other state and federal funds for the region’s transportation projects. All of these funding programs are included in the SANDAG \$42 billion Mobility 2030 Regional Transportation Plan (RTP).
